Lesson 36 CPP Calculator

In this lesson we will make a calculator program

It will be as follows:

```cpp
#include <iostream>
using namespace std;
int main() {
    float x, y;
    char c;
    //+,-,*,/
    while (1) {
    cin >> x >> c >> y;
    //user enters the variables and operator
    if (c == '+')
    cout << x + y << endl;
    else if (c == '-')
    cout << x - y << endl;
    else if (c == '*')
        cout << x * y << endl;
    else if (c == '/')
        cout << x / y << endl;
//y shouldn't be 0
}}
```
